skills of AutoCAD users and give them better access to Autodesk's software, training and support. Features Vector-based applications The main features of AutoCAD are vector-based applications. Vector-based, or raster-free, graphics are characterized by freeform placement of graphical objects (called "shapes") on the screen. Freeform graphics are easily re-positioned, and are not limited by the number or size of pixels which are "pasted" on the screen when shapes are pasted on the screen. The ability to move and change the shape of any graphical object is what differentiates a vector-based application from a raster-based one. AutoCAD applications include most of the standard features present in vector-based applications. These include the following: Draw shapes Place objects Duplicate objects Erase objects Move objects Scale objects Rotate objects Edit objects Crop objects Change layers Copy objects Group objects Separate objects Join objects Break apart objects Undo Redo Save changes Reload from last saved version Revise objects Revert objects Save current project Close project Collaboration AutoCAD is used for much of the visual development and review of architectural and construction projects in many countries around the world. It can be used in a variety of methods for collaboration, including: Vector based. In the normal editing method, shapes are aligned and modified, the exact same way that they would be in a paper drawing. Thus, a point or shape can be moved or deleted from its a1d647c40b
