```
NSString *key = @"password"; NSLog(@"%@",[[NSUserDefaults standardUserDefaults] objectForKey:@"password"]);
```

gives me one password and one entry in the keychain (one entry for key and one for pass). Is there a way to make NSKeychain return only the password if the key is @"password"? A:

```
NSString *key = @"password"; NSString *data = [[NSUserDefaults standardUserDefaults] stringForKey:key]; NSLog(@"%@",data);
```

Tales of an Expedition by John Muir, 1894 £11.95 P.S. Strangely, the back of the book has been written by Thomas F. Rice, while his son, John Muir, wrote the front. I wouldn't have known who was who, had I not gone online and looked them both up.

Unfortunately, I don't have a copy of the original, I am just getting the revised edition published at the end of the month. I just find that fascinating, how two men with such contrasting lives could have such similar ideas. I think it's the same reason people are fascinated with the inner workings of corporations and businesses- there is a certain magic that can happen when two different people come together and collaborate. And collaboration is one of the main themes of this book, looking at how people, and nature, come together to provide us with oxygen. I have no idea how my explorations might have gone without the discovery of the key insights outlined here. OK, the idea of someone making a whole book out of talking about oxygen is so outrageous that I am going to leave it for the next post. Effects of classical activators and inhibitors of protein kinase C on voltage-activated K<sup>+</sup> currents (I(A)) were studied in cultured chick embryo dorsal root ganglion cells. When using 2-5 min application of phorbol 12-myristate 13-acetate (PMA, 500 nM) in solution, a depolarizing shift of the I(A)-V curve is observed. Application of PMA during the repolarizing pulse induces a hyperpolarizing shift of the I(A)-V curve. Hyperpolarization is also evoked by application of PMA during the depolarizing pulse. The presence of intracellular GDP-beta-S (20 microM) during the application of PMA inhibits the hyperpolarizing effect of PMA and abolishes the shift of the I(A)-V curve. The hyperpolarizing effect of PMA is also inhibited by the addition of intracellular calmodulin antibodies (100 ng/microL). The shift of the I(A)-V curve evoked by PMA is not associated with changes in ionic channel density. The results indicate that classical protein kinase C activators induce a decrease of the open probability of the voltage-gated K<sup>+</sup> channel (with no change in the number of channels), resulting in a hyperpolarizing effect.

Jörg Rogge Jörg Rogge (born 11 July 1963 in Willemstad, Curacao) is a former tennis player from West Germany, who won the German Open on two occasions, in 1994 and 1996. Career Rogge played on the professional tour in the 1990s, competing at two Grand Slam tournaments, the US Open and the Australian Open. Rogge won the 1994 German Open men's doubles title with Alexander Volkov and won the 1996 German Open men's doubles title with Kim Warwick. He also won the German Open on four other occasions between 1984 and 1999, with victories in 1987 and 1989 over fellow German player Martin Damm, and in 1988, 1994 and 1995. Rogge represented West Germany at the 1992 Summer Olympics in Barcelona, as a member of the German team, but he did not qualify for the singles tournament. He reached his highest doubles ATP singles ranking of No. 162 on 20 February 1997. f30f4ceada
