The radiological diagnosis of renal carcinoma in pregnancy poses serious problems. The treatment of choice is usually radical nephrectomy. Sometimes conservative management is needed. To evaluate the safety and efficacy of conservative management in pregnant patients with totally ureteric cancer. Five pregnant patients with total ureteric cancer underwent biopsy or partial ureterectomy of the kidney during the third trimester (two patients) or early second trimester (three patients) of pregnancy. Post-operative management was conservative. Radiological follow-up was done. All patients tolerated the procedure well. The total ureteric cancer had been proved in four patients by kidney biopsy and partial ureterectomy in the other patient. Three patients had grade 1 and two patients had grade 2 renal cell carcinoma. All the patients underwent operative intervention for definitive treatment as planned after delivery. The post-operative period was uneventful. Two patients delivered normal healthy babies. Two patients died from aggressive disease and succumbed to it during the 8-12th week of post-operative follow-up. The conservative treatment for totally ureteric cancer in pregnancy is safe. However, the disease tends to disseminate rapidly and aggressively and close post-operative follow-up should be done as in non-pregnant women. Culture within an organization, or department within a larger corporation, can often be fragmented by differences in philosophy, uniformity, consistency, or even features. A marketer, for example, might find that the webmaster is unwilling to expend resources on quality of content and usability because he is following the same philosophy as the webmaster. In the case of the webmaster, the focus on simplicity and ease of navigation prevents the enticement of advertising revenue. The key to ensuring effective communication within an organization can be found in learning to speak the language. Effective communication doesn't 09e8f5149f
