

Norms for the treatment of wool at all stages of the fibre processing chain (SITRA). Fibre processing in general, and weaving in particular are changing rapidly, and old weaving practices are being replaced or updated. A new text will be introduced in the SITRA-Norms-for-Spinning-Mills.pdf. The SITRA norms are used in Germany, S. No. Department Good Average Poor 1 Conventional cone winding • Mechanical 5.5 4.4.1 Handling... waste is now being recycled... machinery to be connected to the power loom is a rope. 6.3.1 2.1.2 Power loom and handloom power loom based on teaching considerations. Therefore, the method described in this chapter should be followed for. Norms for the treatment of wool at all stages of the fibre processing chain (SITRA). and the densification of the yarn as needed to make a `high-performance yarn` which is the denominator for the various quality criteria (see Section 4.1.6). The method of adopting SITRA-Norms has been emphasised in the policy. to use the SITRA norms. The SITRA-Norms are based on the raw material as the only factor. SITRA-Norms-for-Spinning-Mills.pdf. 2. Textile mill A textile mill () is a factory or other large production site that produces textiles, often heavy duty. Manufacturing remains its core business, although some mills now include a production of commercial goods such as clothing, shoes, socks, knitwear and household items. 3. Dredging Dredging is the process of dragging or dragging across the bottom of a body of water to increase the area of deposition of sediments. See 4. Vertical integration Vertical integration is the practice of acquiring or establishing a direct ownership interest in the firm's suppliers. That is, in contrast to horizontal integration, which involves acquiring or establishing a direct ownership interest in the firm's customers. 5. Waste management Waste management is the process of managing and disposing of waste. 6. Cotton mill A cotton mill is a factory that produces cotton yarn from raw cotton. The cotton is first "picked" to remove the seeds, then spun to remove the fiber. 7. Fiber mill The fiber mill is a machine in the textile industry, generally of the carding variety, used to remove and process fibers, such as fibers of cotton, wool or flax. 8. Weaving mill A weaving mill in the textile industry is a large-scale weaving operation. 9. Indexing Indexing is a technique by which yarns are wound on large spools in order to improve their distribution. The machine uses an indexing arm to find the best position to put the yarn in order to achieve maximum uniformity. 10. Loom A loom is a machine that operates the warp threads (the warp being the horizontal threads of a weaving) and harnesses them to the heddles (the transverse threads) through the shed. 11. Tapestry A tapestry is a woven textile, the name "tapestry" originating from the tapestry weaving technique invented by Gerhard Gerserich, an Augsburg goldsmith in 1433. 12. Blinding Blinding is the act of impregnating yarn with dye, and is accomplished by dipping or padding. When dyed yarn is wound onto hanks, it is usually called "ware". 13. Spinning mill A spinning mill is a factory that performs the entire process of wool spinning, from the preparation of 9df0af710a
