KEYMACRO is a simple yet fully featured Windows application for generating MAC (Mandatory Access Control) passwords. It generates random MAC passwords which are created using 8-bit string keys and are stored into a list. Mac passwords are used to restrict access to specific files and folders. They are, therefore, extremely important in protecting confidential files and folders. Mac passwords ensure that only the authorized user can access a specific file or folder. The passwords will not be stored, as is the case with most other password managers, but instead they will be used by the computer for security purposes. The features of the program include: - Generate a random MAC password for each file and folder.- Unlimited number of passwords.- Password length from 1 to 100.- Password complexity (at least one uppercase letter, one lowercase letter, one number and one special character).- Password creation using a dedicated key.
