The program can also be used to stay in touch with your friends, family and colleagues across the globe. This application was developed to help users of North America. Features:  Full World Time Zones Supported  Affiliate Date picker  Links to different countries  Shortenable URLs from different time zones  Send Email to selected zones  Share Support for Facebook, Twitter and Google Buzz  Personalize your settings, and even per-user settings This free tool will bring back a little of your childhood, after you start living in the Computer Generation. The TinySpy Project aims to create free, legal, cost-free software for people who wish to keep an eye on what others are doing online. The software, in its current form, is a feature-limited HTTP proxy that allows you to view traffic routed through your local network. TinySpy Project allows you to view all the HTTP requests and responses that are sent and received through your PC. The proxy supports Open Proxy, Port Tunneling and HTTP Over HTTPS and allows you to view all the HTTP URLs of any page currently opened on the Internet, from a private network point of view. TinySpy Project doesn't accept any log files or change system settings. It does not install any software or make changes in your computer. Requirements:  Windows 2000, XP, Vista, 7 or 8 WorldTime Description: WorldTime is an application designed to keep you informed about various world time zones, including different time zones in the United States. ## What's New In WorldTime?

WorldTime Description is an application that's designed to help you keep a check on the time wherever you go. It provides you with a number of options that allow you to keep in sync with time zones and weather conditions. However, the program is a little inconsistent when it comes to options and features. On the one hand, it has an alarm clock option with which you can set a date and time to be repeated in 1, 3, 5 or 7 days. You also get a temperature and weather forecast option which allows you to keep up-to-date with the latest info about the local weather conditions. Unfortunately, it doesn't allow you to set up weather alerts. Apart from that, you will also find an option that allows you to choose up to four locations that you can automatically sync with, along with a feature that also lets you set up a weather weather alert. While this sounds like a pretty cool functionality, there's no option that will allow you to import your own data or use other program widgets. Also, there are no widgets available to integrate the WorldTime with the desktop and menus. Plus, you don't get the option to choose your screen location. Additional Features: WorldTime Description is a lightweight program that brings timekeeping functionality to your computer and allows you to keep a check on the time, no matter where you are. Software Requirements: WinDbg is an excellent code debugger application that allows you to inspect and debug your.NET Framework assemblies. Free and open-source, WinDbg is the free debugger for.NET, Cocoa, and native applications. Thanks to its flexible nature, the software can process multiple processes at the same time, allow you to set a break point, continue execution or resume it, and use the Windows debugger console. A standalone version of this application will always keep up with the latest C# versions, and comes in handy when you want to debug your VB.NET and classic apps or create.NET 4.0 applications with Visual Studio 2010. The interface is very easy to use, as you will see in the next section. Features:  Open project files as they appear on the disk  Open application settings files  Enable process or threads debugging  Disable process or threads debugging  Set breakpoints  Continue and resume  Enable keyboard and mouse monitoring  Show the Windows event viewer and debug the
