What's New in the?

Save time with Autodesk's dynamic line-builder to cut over 100,000 lines of code and still perform as well as other line-drawing tools. Use built-in feedback from the Autodesk Prove™ tool to instantly incorporate drawing updates and corrections from Prove-created drawings into your document. This functionality can also be accessed within other Autodesk tools by selecting Autodesk Prove™ from the Tools menu. Create action-ready mechanical parts on the fly with Autodesk's new, fully integrated CAM tools. New features: Autodesk has a rich toolset that provides all the functions you need to produce accurate engineering drawings with no additional costs. Import and edit and combine files from different file formats. Add, modify, or delete parts, structures, and views. Edit component views and transform them into a drawing. Add, modify, or delete annotations and dimensions and see them in the drawing. Edit geometrical data and dimension properties in the drawing. Add and edit text, numbers, and characters. Add, modify, and delete dimension frames. Using Import and Transform, edit and update shared components and insert them into the drawing, either directly from an existing model, an external file, or a 2D image. Improvements: Add a new user interface and improved logic to reduce the number of required object selections. Use the Editing Data engine to edit data values in a better way, while maintaining the same editing speed. Add tools to get insights from your drawings and workflows, and then explore the insights in 2D or 3D. The new modeling environment allows you to create geometric data with double precision and to manage the modeling environment using the CUI tool window. Improvements: Create and edit structures and get insights in real time. Organize the drawing and edit it easily. Visualize and modify existing or new styles. Enhance the Navigator tool so that you can easily zoom in and out of the drawing canvas. Improvements: Detect and analyze styles. Using the Navigator tool, automatically detect and name styles. Enhancements: Synchronize and animate the model with animation and parameters. Update the Model Browser so that you can directly see the data values.
