In addition, it is possible to use Python scripting (through the CommandBars Python module) to perform advanced or low-level tasks, and to use the AutoCAD Javascript API. Workflow Workflow is the way a CAD system automates the drafting, editing, and printing of a model. Workflow is often based on the notion of a "work item", which can be one or more design elements (layers, blocks, or other entities). Each design element can contain one or more attributes (or properties) of the design, such as the block style, color, and text. Workflow typically has an editor for the design element or a workflow process that governs its creation.

Workflow also has a system of data-tracking capabilities that allows the management of design element attributes. In AutoCAD, this is often referred to as intelligent tagging. Integration of other applications The following list is not exhaustive. AutoCAD Extension for other CAD systems: AutoCAD extension is a cross-platform AutoCAD plug-in that can be used with other CAD systems, such as in PlantCAD, Inventor and Delcam. The latest version of the extension is an XML-based plugin, allowing designers to have access to functions of other CAD software using XML-based communication. The extension is available in both the Revit integration category and the third-party category. Linking software: Cross-platform linking tools can be used to send files between AutoCAD and other applications. When there is a link, AutoCAD can exchange files with the linked software or give information about the link, making it possible to use the linked software without

AutoCAD. This includes the following: AutoCAD: DirectShow: Can open or export a wide variety of video formats with the ability to see HD files through a Windows Media Player-like player and to control the source of a clip by using a mouse. Film Link: Uses directshow to link the software with the video format file. KINO:

Cross-platform linker which provides directshow, showing a live preview of the files that can be sent. The Linking Wizard: Allows users to easily add linking to an application through drag and drop. Acoustics Linking:

Allows transferring audio and video files, such as multimedia notes and audio to a meeting. AutoCAD LT
