CAD Standards AutoCAD uses a variety of international standards such as DIN, ISO (ISO: International Organization for Standardization, 2009), ANSI and BS (British Standard), ISO 9001-2001 (ANSI/ASA S100), ISO/ANSI 1193 and ISO/TR 11922. AutoCAD itself is based on the D10 standard. By

In my application, I need to create a list of records by traversing an input list of hashes (inputs) by using ActiveRecord::Relation. When the list is empty, I need to return the empty list and when the list has some values, I need to traverse the input list, assign every value to the corresponding hash and then generate a hash and call the 'merge' method on it to return a list of hashes. My first try looked like this:

```
def _list require 'ostruct' list = new_collection return [] if list.empty? l = list.to_a l.each do |h| klass = h.classify
```

h[:value] = h.assign(:value => klass.name).merge(:name => klass.name) end return list end It works, but I would expect that the ActiveRecord::Relation object would have methods that I could use to process the records, like a find_all or something. So I've tried to find that out and thus I came up with this: def _list require 'ostruct' list = new_collection return [] if list.empty? l = list.to_a l.each do |h| klass = h.classify h[:value] = h.assign(:value => klass.name).merge(: ca3bfb1094

What's New In AutoCAD?

With Markup Assist, create and generate text labels, dimensions, and annotations directly in AutoCAD. Annotations don't require the drawing to be saved, and they are generated at the click of a button. Designers can now also track their annotations for later review and application to other drawings. Get real-time feedback from drawing previews: With PDF Printing, you can preview your PDF drawings directly within AutoCAD as you make changes and incorporate feedback. The PDFs are saved and updated for future viewing. Markup Import and Markup Assist are available for AutoCAD LT. Raster: Quickly import raster layers and modify existing layers or delete them entirely. The BIM Layers panel is updated to display the importable layers and show the new raster layers. Import layers from other applications: Now, layers can be imported directly from popular applications including Revit, SketchUp, and Adobe Photoshop. Drafting: The Design Center and App Center are redesigned to make Drafting projects and drawings more approachable. The Design Center: With new project workflows, the Design Center can more easily help you plan projects and organize all the steps needed to complete them. New wizards help you automate your most common drawing tasks. You can now also add custom Roles to easily organize project drawings. The App Center: The App Center, where AutoCAD LT, AutoCAD, and other AutoCAD applications can be found, is being redesigned to make it easier to find and download applications. Now, you can use the Quick Look feature to preview and select a PDF and show it in any application. 2D: Reduce the number of polylines in your drawings and animations by using the Polyline Simplification command. New optional options for the display of the measurement scale (mm and the like), polyline contour lines, and draft point labels. Use the new move/copy and lock commands to support scale transforms. When you want to scale a line, a polyline, or a graphic, select them all and use the scale tool (the plus sign) or the line, polyline, or graphic tool (the minus sign) to create a transformation. You can now define named namespaces for polylines, splines, and hatch patterns. This allows you to group and organize various types of polylines and splines together
