:AutoCAD Python API AutoCAD A360 is a web service that allows access to functions and data in the AutoCAD computer-aided design software program. AutoCAD LT is the low-end version of AutoCAD which is a 2D drafting, vector graphics, mechanical design, and package design application. It does not include some features like DWG, PLT, or CADS, and is not as powerful as AutoCAD LT. Cross-platform AutoCAD plugins This section provides a list of AutoCAD plugins that work on different platforms. Zoom3D Zoom3D is a free 3D modeling and rendering program for Windows, macOS, and Linux. It has a plugin API for plugins written in Autodesk's own LSL language. This makes it a potentially good add-on for AutoCAD users who want a 3D design tool with an integrated engineering and simulation package. Adobe ACD systems Adobe Systems provides an SDK (Software Development Kit) for use with its AutoCAD package, the Adobe Creative Suite. It also provides a plugin system, similar to AutoCAD's own. This means that users can write plugins in any programming language, such as ActionScript, Java, Visual Basic, C++, or Delphi. PhysicsObject The PhysicsObject plug-in is a physics engine and a very powerful engineering simulation program. This plug-in can be used with the other physics tools, like Nastran, Abaqus, and JFS.
