Looking for a tool to work with files? It's now easier than ever to use. And the first question is: what file types can be monitored? SmartFileChanges is a free, portable, easy-to-use utility which monitors all files and folders for changes. This software is portable, meaning that you can skip the installation process, it doesn't modify any files and doesn't leave any folders or registry entries behind. Every time a file, folder or URL changes, an update is going to be displayed. The update includes the full path, file type, size, last change time and user. By its intuitive design, it is very easy to use for any individuals regardless of their experience level, and it does not require any computer knowledge or previous data preparation. Once the monitoring is started, the interface is going to be focused on the live activity. All folders and drives are going to be monitored by default. It is not possible to exclude some drives, folders or add a folder for monitoring by right-clicking it. If a drive has been added, it is going to be automatically monitored, and can be removed if it is no longer required. To monitor a particular drive/folder, click on the "+" symbol located next to the drive or folder. Next, all the drives and folders that are not going to be monitored are going to be listed. You can exclude some folders by right-clicking them. Upon completing the changes, you can click on "Hide Updates", which will allow you to see only the last entries. All of the monitoring results are going to be displayed in the main window in text format, like TXT, CSV, XML, HTML. You can save these reports to disk, using an easy-to-use check box.
