PoiZone is a useful and reliable VST synthesizer that enables you to enhance your audio experience by linking your controller to specific MIDI CC values and creating an output changes at a rate less than 30 Hz. After setting an audio file inside FL Studio, you can quickly access PoiZone in order to configure its settings. It comes with a simple and easy-to-use interface from where you can quickly import an existing CC map or gate pattern. What's more interesting at this audio plugin is that it provides you with two audio oscillators that can help you to produce useful shapes for subtractive synthesis. Each of them provides you with SAW and PULSE shapes. Also, PoiZone comes with two amplitude envelopes, which can be used in sound synthesizers, namely ADSR (Attack-Decay-Sustain-Release) envelopes. One of them can be used for traditional envelope duties, while the other one can be user assigned. By using these envelope generators, you have the possibility to control the sound's parameters at any point in its duration, as well as to filter the audio frequency. Besides, the MIDI section enables you to route a MIDI controller to a range of targets in PoiZone, while the LFO section controls the parameters inside PoiZone in order to add motion or variability to sounds. Although it has a compact interface, PoiZone provides you with three filter modes and a multi-mode arpeggiator. Thus, you can synchronize the playback of multiple patterns so you can create a complex sound while holding down the notes and the chords. As far as the sound effects are concerned, the VST plugin comes with two complex effects that help you to adjust the sound's parameters. Therefore, the Delay effect provides you with tempo-synced stereo delays and time modulation, while the Chorus effect comes with a great unison emulation. To conclude, PoiZone offers a straightforward solution to expanding your sound effects with minimum effort. PoiZone Features: Inputs – one stereo input and one mono input Outputs – four outputs LFO – LFO generator Envelopes – two ADSR and a user-assignable envelope Filter – three filter modes: High pass, Low pass and band-stop MIDI Interface – provides MIDI 1.0/CC mode; two MIDI line outs Sound/Filter – two analog oscillators Arpeggiator – four tempo-synced arpe
