Infested ships have overrun the galaxy. A fleet of eight starships was supposed to be there to clean up the job, but somehow, in the two centuries since the war, only three remain. One is yours: the SSV Hummingbird. You and your crew take the fight to the infestation. One slip and you become infested. Or you can just sit back and let the ships take care of the infestation for you. What is Infestation? Infestation, short for "The Infected" is a sci-fi

turn based strategy game where the player fights against the player and the ship's AI takes care of the enemy. One player controls two factions, each with four ships, four techs, and one reinforcement card. The AI controls the rest of the fleet. Two players will each control one faction with two ships, and the AI will control the other factions. The game was designed around the card based combat system so it works perfectly with this system. Ship Gameplay: Each ship is made up of three groups that determine its strength and maneuverability. A ship's faction denotes what group controls the ship. The groups are Attack, Fight, and Boost. Attack ships use their strength to attack opponents. Fight ships use their strength to fight back. Boost ships use their strength to move across the board faster than their opponents. Each faction also has a special ability that can be used in battle. These abilities add extra flexibility to the ship and to the game. The game pits you against another player's AI-controlled ships and the ship's AI takes care of the rest. Game System: Ship Combat Each player controls two factions of

ships. Each faction consists of four ships, four upgrade cards, and one reinforcement card. The combat between players' fleets is turn based. Both sides take turns alternating a turn so that each player has one turn to make his/her turn and then one turn to defend it. Each faction is in different sectors of the game board. If a ship is in the sector that is adjacent to another ship, they can attack each other as normal, if the ships are in different sectors, they are considered adjacent enemy. Example: Ship A is in Sector 1, Ship B is in Sector 2, and Ship C is in Sector 3. Ship A has the closest ("adjacent� d41b202975

**What's new in Vessels Of Decay:**

is a series of films about the glorification of military power and violence, about the effects of war on human bodies and minds. Some of the moving images in this series, written and directed by human rights activists, are from recent conflicts in Cambodia, Congo, El Salvador and Guatemala. More than seventy-five years ago, the early dub for Soylent Green was "It's Alive," detailing a scene where a slew of human beings riot violently and carnivorously for a pumpkin. It wasn't a film per se, but a short story about a green menace and how humanity reacted in the face of fear. The story was coupled with a special effects sequence created by a team of artists and technicians whose task it was to render the monster. The visual studio was called "Painterly Productions and, as such, existed for the brief period of time that they produced this offering of soft-flesh, all flesh. By the 1930s, more explicit bloodletting appeared in classical tales such as "And Then They Sing" and "Under the Volcano." In El Topo, a rough, ambiguous narrative characterized by the absence of an identifiable plot, a narrative such as that of no film can offer, the protagonist is treated like meat. "Eyes are bad, cut open and drained dry. The blood and the skin." He stands in a slowly filmed fall toward the ground, his feet crumbling into some gory place where as narration, he screams and mewls. Coming out of this disturbing, violent scene, the explorer runs into a world full of speculative words: It's Alive! It's Alive! It's Alive! This mimicked footage of a decaying monster continued on, proliferating as the Cold War became a period of more likely conflict. From 1953 to 1964, the images were generally of nuclear destruction. But the theme also continues in the form of mind control and the call for breeding programs that fall short of the utopia they promise. Speculative fiction and film owe a great deal to Blade Runner, a sci-fi classic whose visionary

**genius is hard to define but that has become a modern classic. Because of the film, it's possible to imagine a utopia of cyberspace, the fourth dimension, where all living beings are represented by the intelligence projected in microchips and it's possible to distinguish between being "techno-**
