Although Adobe offers Photoshop in both desktop and online versions, we will use Photoshop CS5 for this guide. The newest version of Photoshop is due to be released in December 2010. With Photoshop, you can easily remove unwanted elements from a photo such as dust or dirt, and you can add special effects that simulate the look of old photography, such as polarizing or graduated filters. For example, a b/w photo, with a polarizing filter applied, looks like a daguerreotype. You can use Photoshop to simulate the appearance of this old technique by painting selective colors into light or dark areas of the photo. The current version of Photoshop is able to apply two of these filters. In this tutorial, I will show how to simulate a processed look with Photoshop. I'll give you instructions on how to mimic the polishing techniques of old photos, and I will also teach you how to apply a vignette effect that simulates the most commonly used printing technique of old photos: half-tone printing. In this tutorial, I will show you how to create and apply one of the most common effects in Photoshop: the gradation of tones. This involves simulating an old faded print. The visual effect created by a gradation is called vignetting. It is a technique that is popular in vintage photography and is used to control highlights. Photoshop does a very good job of simulating the look of old prints in this effect. You will be able to create beautiful, convincing results that look like actual old prints. In this tutorial, we will be using Photoshop to simulate an old printed photo. This technique is very easy to create and implement and you will be able to see a finished photo immediately. The first thing you will need to do is to launch Photoshop CS5. Once you have a screen displaying the window options, click Window → View → Screen Mode. Check the box for "Overlay" and click OK. This will turn your screen into a graphic overlay so that you can view your finished photo in your working document at all times. To start, we need to open a new document in Photoshop. This should be a large document so you will have enough room to work. When you load the file, your document should appear in the center of the screen. The next thing you will need to do is to click on the layer named "Background." This layer can be found
