As of September 2019, AutoCAD Product Key 2020 was the most recent major release, succeeded by AutoCAD LT 2017, AutoCAD 2018, and AutoCAD LT 2019. Version 2020 was released on September 15, 2019. AutoCAD is used for 2D drafting, 3D modeling and presentation, mathematical calculations, and creating animation and graphics in education and science. AutoCAD is one of the few CAD programs to be used for 3D drafting and 3D modeling, a testament to its power and popularity. In 1992, Autodesk developed AutoCAD LT, a lower cost version of AutoCAD for single-user use on desktop computers. AutoCAD LT also comes in versions for laptops. AutoCAD is an industry standard CAD application for the following domains: Architecture Construction Engineering Facilities management HVAC/plumbing Industrial design Manufacturing Masonry Modeling Mechanical Prefabrication Structural Building Information Modeling (BIM) AutoCAD and its derivatives, such as AutoCAD LT, are sold commercially in over 100 countries., the latest release of AutoCAD was version 2020 (18.1). (Versions released in the 21st century: 1991, 1992, 2001, 2003, 2005, 2007, 2009, 2011, 2013, 2014, 2016, 2017, 2018, 2019, 2020.) Conception The first AutoCAD Activation Code (AutoCAD Version 1.0) was conceived by Corne Pruessner as a digital front end for drafting on minicomputers, originally by Computervision (later on, Apple and Microtec), but later on by Symantec as well as FoxPro/Starworks. As the drafting world was going to be moving to the 3D space, Corne envisioned this software as a 3D drafting application. The first version was released for MS-DOS in 1983 and was based on earlier draftsman's tools. It was only later in time when it came to be based on the Apple Macintosh that AutoCAD became a 3D application. Early development AutoCAD's development began in the late 1970s, when Corne Pruessner, a graphic designer and draftsman at AutoDesk, was interested in a 3D software package for his clients. He wanted to be able to take something that they had just drawn and to produce a package for it. His concept was the basis of a company called Congeo, which became a subsidiary of Autodesk. AutoCAD was designed to work with AutoDesk's Pascal computer language; Pascal (with other programming languages) would later become the base for ObjectARX. A related product was AutoCAD LT, which was released first as an extension for AutoCAD (called AutoCAD/NT), and later for the Apple Macintosh. AutoCAD/NT had limited compatibility with the Mac version. These early

versions were also used for a brief time as a portable version for Windows (called AutoCAD Pocket) while Microsoft approached the software for inclusion in Windows. With the introduction of AutoCAD LT, Autodesk ported AutoCAD to the Macintosh as well, although the software is not identical in appearance to AutoCAD on the Macintosh (the latter is based on a cut-down version of the Windows AutoCAD). The first AutoCAD for Windows was introduced on December 6, 1985, and was based on the original (Macintosh-only) AutoCAD with small modifications and enhancements. It was available as either a 32- or 64-bit version, depending on the processor type. The 64-bit version only supported the 286-class processors. Microsoft's decision not to include AutoCAD in the Windows 3.0 operating system delayed the release of AutoCAD 2.0 (which was finally released ca3bfb1094

Brazil is the largest agricultural producer and exporter in the region, and is the third largest food exporter in the world. Chile, Argentina, Colombia, and Peru are also among the top agricultural producers in Latin America. And although historically the region has been poor in terms of food production, the most recent study by the FAO (Food and Agriculture Organization of the United Nations) highlights that from 2013 to 2014, food production in Latin America grew 3.2 percent, in a region with an average population of 1.5 billion people. According to the same study, an average of 105 million tons of cereals, 11.7 million tons of meat, and 33.8 million tons of vegetables are produced every year in the region. The growth in food production comes with a huge impact on the environment, as agriculture is a key sector in terms of CO2 emissions and climate change. In the European Union (EU), agriculture accounts for 15 percent of all greenhouse gas emissions. And in Latin America, the figure is even higher, as it is one of the main contributors to the greenhouse effect. When taken as a whole, the sector accounts for 27.7 percent of all greenhouse gas emissions in Latin America. In terms of CO2 emissions, agriculture accounts for more
