AutoCAD is built on AutoLISP (Automatic Lisp), a programming language that is a variant of Lisp. Usage AutoCAD is sold as a suite of applications that includes AutoCAD and related product applications. The suite includes the following: AutoCAD R13 AutoCAD Electrical AutoCAD Mechanical AutoCAD Architectural Desktop AutoCAD LT AutoCAD DWG AutoCAD Web AutoCAD Lightwave AutoCAD Mobile AutoCAD 360 AutoCAD eXplorer AutoCAD Inspire AutoCAD Cloud AutoCAD Design Web AutoCAD Design Center The following are some of the most important and most frequently used functions of AutoCAD: R13 and DWG AutoCAD R13 and AutoCAD DWG, also known as AutoCAD LT, are primarily used by architects and engineers for 2D drafting and model-based drafting. They are particularly useful for 2D drafting because they are the only AutoCAD applications that allow designers to create 2D drawings on one page. These applications can be used to make 2D and 3D drawings in a range of file formats, including .dwg, .dwgx, and .dxf. To open AutoCAD DWG files, you must install the appropriate DWG file extension plugin, available in AutoCAD LT or AutoCAD 2017. Viewing, modifying, and saving a DWG file creates one or more AutoCAD Drawing entities. A drawing entity contains all of the information for a particular drawing; a drawing entity may consist of one or more views, either connected or not. A view is the area you see when you open an AutoCAD Drawing file. The view is specified in the Drawing entity by calling the ShowView function, which returns a handle to the view, along with information about how many levels of detail (layers) there are in the view, and how many views there are in the Drawing entity. You can also add and move views, and you can print, export, or save the Drawing entity to a DWG file. AutoCAD LT AutoCAD LT is used by architects and engineers for 2D drafting and model-based drafting. It includes functions that work

Florida Medicaid drug trials expanded The state is expanding drug trials to a greater number of Medicaid enrollees, a move in line with changes in federal health care policy and Florida's Medicaid spending rules. The state already has begun giving some of the state's Medicaid drug patients access to studies of the nine generic drugs. Now the state will pay for about 100 more drugs to be added to the studies, said Bill Little, a spokesman for the Department of Health. "This program is really designed to give a number of things: identify the types of drugs that should be part of the formulary," he said. "It allows us to make sure the kinds of drugs that are provided on the Medicaid program are similar to the drugs on the Medicare plan." The Federal Government pays for about 50% of the state's Medicaid costs, which means the change would not add to the state's Medicaid budget. "This is not going to be budget neutral," he said. "It's going to cost us money." Even though the state will lose some money on the study drugs, the change is expected to cut drug costs for Medicaid

enrollees. He said the change will help ensure Florida's Medicaid drug patients are receiving the "right medications, at the right cost." The state already sends an average of \$4,200 to drug companies each year to support Medicaid drug trials. To qualify for the study, the drug would have to be listed on the state's drug formulary. So far, only nine drugs are included in the state's formulary. Little said the studies will give Florida access to a greater range of drugs. Florida's Medicaid rules limit the amount of money spent on drugs. The state will also be able to cut back if the drugs are not performing as hoped. "It gives us the opportunity to look at any drug on the market that we're buying for the Medicaid program to see if it's actually being used," he said. "That gives us a lot of flexibility." The studies, which will be funded by the state, will be available only to Medicaid patients. "We're kind of getting a laboratory test for drugs," Little said. "We ca3bfb1094"

## What's New In AutoCAD?

Select and label the elements in your drawing to send them directly to a package or template. Send your exported data to third-party applications or services, such as AI. (video: 1:07 min.) Set the level of visibility for selected blocks, inclusions, or annotations. Provide a visual overview of what you've added, reducing clutter in your drawings. (video: 1:18 min.) Track and keep track of changes made to your drawing using the new version of the Markup Assist technology. This enables you to retain a history of changes made to your model and to recover a draft version that was edited before you finalized the changes. Subtypes and Subclassing: Customize your objects in your model with subtypes and subclassing. When you subclass an object, you automatically extend its properties and options without the need to create additional objects. (video: 1:12 min.) Adjust the level of detail in an object. You can increase or decrease the number of polygons and elements in an object, depending on its purpose. (video: 1:19 min.) Pre- and Post-Operations: The Post-Operations dialog box enables you to add or delete operations from a list of post-operations, before you perform them. Add a label to an object before you add it to the drawing, to simplify a drawing process and improve its readability. (video: 1:32 min.) Fine-Tune an operation's settings. You can review and fine-tune properties of an operation before it is executed. Optimizing the performance of your CAD software is one of the fastest ways to gain a competitive advantage in your company. The new 2023 release of AutoCAD includes more performance options to help you better optimize your work. Interactive Design Forms: Simplify the design workflow with interactive forms. Use interactive forms to collect information from your users. Your design changes depending on the feedback you receive from your users, without any additional steps or data entry. (video: 1:08 min.) Link the information from multiple forms and in real-time. Keep connected information organized in your design. Simply press a shortcut key to move to the next form or to send the information in real-time to a related form. Quickly create worklists for your forms. Assign forms to a specific worklist for
