X-InnoIDE is a handy software utility which helps people create app installation files with just a few clicks and support for InnoSetup compiler scripts. This tool does not require installation, as it represents the portable counterpart of InnoIDE, and therefore is not going to affect the Windows registry and Start menu/screen in any way. After you remove it from the PC, there will be no leftover files. In addition to that, if you place the program files to a portable storage unit (e.g. USB drive), you are able to run X-InnoIDE on any computer you have access to, by clicking the executable. The interface consists of a menu bar, a few shortcut buttons, a navigation pane and a panel in which to display all the details and options available. Moreover, although it is considered to be intuitive, it cannot be used by anybody, as it contains specialized terminology that beginners might not understand. This utility supports both Pascal and InnoSetup scripts to be built and edited. Each element you integrate into the final item can be customized and it is possible to easily move from one section to another, so as to define options pertaining to icons, registry, components, messages, tasks, languages and the list goes on. It is also possible to input minimum system requirements, supported architectures, user and version information, as well as tweak the settings for compression, disk spanning, installation pages and logs.
