“This technology is in its infancy and we can see its potential to take the future of player simulation to a new level,” said FIFA Senior Producer Matt Prior. “The game will feature a variety of gameplay modes as well as new official player attributes that will simulate real-life movements and behaviors.” This is not a new feature; it’s a classic. Physically-based character models, like those seen in GRID 2 and even the first game in the FIFA series, were based on in-game physics and animations. The fact that you can now run just like your favorite player is just the icing on the cake. “When you’re the best player in the world, you stand out,” said Gustavo Rejcan, Creative Director on FIFA series. “Thanks to the HyperMotion technology, you’ll feel like an even more dominant player than you have in the past.” In addition to looking more realistic and true to real-life movement, this technology also brings new challenges. “Moving the ball and controlling it, based on players’ individual attributes, is what we’re focused on right now,” said Gustavo Rejcan. “For us, this is the next step.” The new real-life movement system is powered by a new data-driven player model. Players’ individual attributes like mobility, acceleration, strength and stamina will greatly affect movement. Combined with the positioning of the player, a wide variety of movement styles will be possible. “We’ve been able to build a lot of movement functionality into this, even if our version of it is imperfect,” said Sandro Miravalles, Technical Director of Football on FIFA series. “You can simulate different styles of movement in terms of acceleration, evasion, ball control, etc. We also spent a lot of time developing more natural movement for both attacking and defensive based on player attributes.” Of course, there are limitations of course; this is only a beginning of what can be achieved and we can see this new player model is a way to push the boundaries of the series. “We’ve gone in a direction where you won’t be able to hide in a corner,” said Sandro Miravalles. “We’re

I want to get my retirement plan contribution in 401k that was taken from my traditional IRA to a Roth IRA. What will be the financial implications of withdrawing a 401k from a Traditional IRA? A: There are no taxes, or penalties or anything. No one sees your withdrawals. There are no penalties. Here's how to do it. Convert the Traditional IRA to a Roth IRA. The 401(k) could be growing or it could be behind. No big deal. When you withdraw from the Roth IRA, you also remove the contribution and start fresh. This is a transfer from a Traditional IRA to a Roth IRA. A conversion of a Traditional IRA to a Roth IRA is a one-time event. Doing this is the same as moving your house from one state to another and changing your Social Security withholding amounts to protect your spouse/kids against a bunch of phantom taxes. For a conversion, the conversion can have tax consequences for you, the one converting. I.e. if you pay 15% marginal tax on your income, then the conversion will hit you and you will lose that 15% on the 401(k) (but that depends on how much tax you will owe). However, the 401(k) is already retired. So your impact will be zero. If you sell your

---

stock and move the profits into the 401(k) and the profits are after tax then that will hit you. If you sell your stock and your HSA is tied to the stock, then you will get some HSA dollars if you pull out a check from the HSA to move to
